1.

April 2025 update

Apologies for the delay on this update — as mentioned in our last note, we've been heads down building the tech, team, and processes needed to onboard the $550K ARR across 21 clinics we closed during YC.

Key Metrics (as of April 30):
Active Clinics: 15
MRR / ARR: $39,400 / $472,346

Total Sold Clinics: 21 clinics, $45,830 MRR ($550K ARR)

Churned Clinics: 6 clinics, representing $77,654 ARR — post-YC, we made the call to churn customers who didn't fit our ICP (practice management systems we couldn't integrate with and pricing that didn't justify support cost)

Progress:

- Built a strong onboarding, implementation, and customer success motion to support rapid clinic launches
- Made key engineering hires and are now shipping faster and more reliably

Laid foundational systems to support scale, including rev ops and product instrumentation

What's Next:
We're targeting $2.3MM in net new ARR over the next 15 weeks (through end of August), which would bring us to ~$2.8MM ARR / ~$233K MRR

Asks:
We're looking to bring on one to two advisors who have experience building large scale healthtech software companies, specifically in areas that deal with on-prem practice management software, to help us think through challenges in integrations

^^Same company's Investor Update: Q1 2025

Q1 2025 was a breakout quarter for us. We kicked off the year joining Y Combinator in January and graduated last month with serious traction:

- $550K ARR across 21 clinics in 9 weeks
- A repeatable GTM engine that's scaling
- And a $4.2M seed round, thanks to all of you

We're deeply grateful for your support. We're building the largest vertical AI company in medical-lite, starting with dental, and our long-term vision is bold: a world where providers can run practices with zero support staff.

🚀 Key Hires
- Jeff Williams, VP of Sales
  - Jeff joins us after 8 years at Weave (W14, now public), where he helped scale their dental sales org. Most recently, he led sales at another dental tech startup. Jeff's deep experience in our space makes him a cornerstone of our GTM strategy
- Cori-Anne Farvo, Customer Success Manager
  - Cori-Anne spent 15 years at E-Assist (800 employees, $130M+ revenue), where she was instrumental in building their internal tooling and driving ops excellence. She brings an unmatched understanding of dental back-office workflows

🔧 What's Next
- We've validated strong market demand—now it's time to build the infrastructure to scale. Over the next 5 weeks, we're focused on building the tech, team, and processes to support adding $600K of new ARR per month. We're heads down and committed to laying the right foundation

🙏 Asks
- We're hiring 3–4 stellar senior engineers to round out our early team. If you know builders who want to help create a generational company at the intersection of AI and healthcare, please send them our way

2.

Subject: Investor Update – May 2025

Asks:
If you know founders or finance leaders at high-growth SaaS companies managing billing manually in an unscalable way or want to modernize, we'd love intros. Please email us and we will follow up with a blurb for an email. Email us <email IDs> for intros.

🏦 Financials:

<Screenshot 2025-05-06 at 1.33.21 AM.png>

📈 **Key Metrics:**
Total Customers: 13
Total ARR: $64,590
MRR: $5,382.5

🛠️ Product:
AI Agent Development

We're at the forefront of building intelligent agents that automate critical customer workflows, including:

- Automated email follow-ups (confidental video of AI payment reminders)
- Task execution through natural language
- System building through integrations with communication platforms like Slack and Teams
- CRM Integration Platform

We've launched comprehensive CRM integrations that streamline the entire quote-to-contract process:

- Seamless handoff from sales teams to billing teams
- Direct quote creation, customer delivery, and opportunity tracking
- Automatic contract generation upon quote acceptance
- Real-time updates to Salesforce, HubSpot, and other CRMs for payment statuses, reminders, and billing information
- Under development: Quote-to-contract fully automatization
- New revenue recognition engine matches standard accounting workflows; built through interviews with top firms
- Flexible contract amendment tool launched
- Stripe subscription migration supported (reducing onboarding friction)
- Platform stability increased, reducing churn, largest customer is happy
- UX/UI upgrades across key pages, improving clarity and usability

<1744386698970.jpeg>
<JustPaid-2025-Y-Combinator-Dinner_9769.jpeg>

👍 Highlights:

We are officially SOC 2 Type 2 Certified as of this week! → successful auditing
Had networking events where we bring possible customers to a dinner with a sponsor
Some press: CFO Tech Outlook Forbes Inc CNET Merit Awards Winner Turpentine
🎯 Current Focus:

Building new sales funnels with partnerships, e.g. fractional CFO firms, accounting firms, testing different sales verticals
Ramping up new marketing ads for LinkedIn and twitter/x
Building a new engineer hiring process with better filtering (we get thousands of applications!)
Using AI tools to enhance all employees work to make us all more effective

Team:

Engineering: We've strengthened our engineering capabilities by adding two experienced engineers with full-stack expertise, enhancing our ability to deliver across both frontend and backend systems
Culture Updates: doing remote paired coding sessions, built enhanced bug rotation

Sales Team Update: one dedicated sales person, in addition to founders doing sales
Let us know if you have questions or want to go deeper on anything.

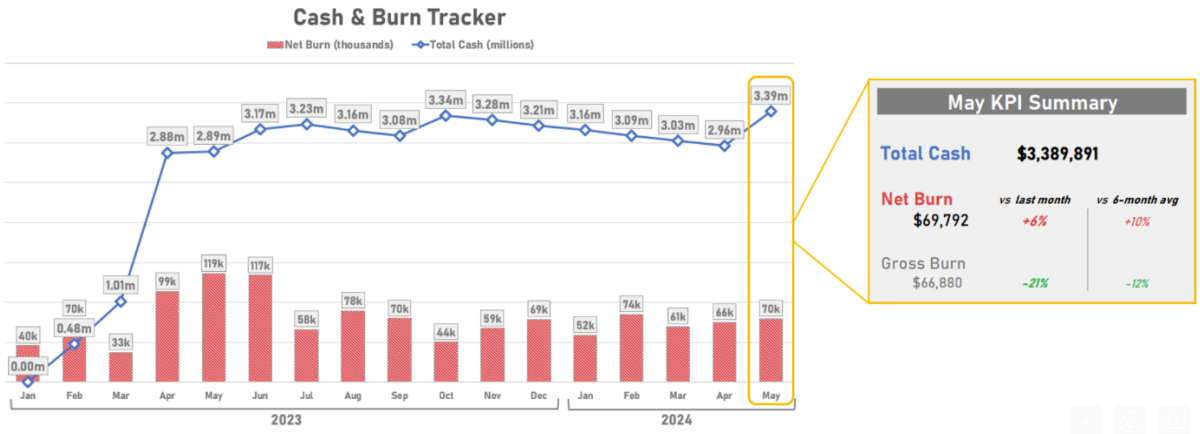

June 2024 Update

Asks

- Asking investors to make an intro to one of their startups and one of their accounting firms to see how we can help them scale with our finance AP and AI agent; please make intros via ___

Key Metrics / KPIs

- We are closing a deal with a midsize accounting firm with over 5,000+ potential clients. To secure this deal, we are developing required capabilities.
- Revenue: 9 SaaS and 1 Collections Client, ten customers, totaling $3,653 MRR and $43,836 ARR.

[value extracted from the graph:

]

🚀 Highlights

- A strategic investor invested 500k SAFE, more to come soon.
- Hosted our first event, AI Unleashed: Turbocharging Startup Growth, in partnership with Codi and CLA, boosting our brand awareness and identifying potential clients.
- Press: Anelya Grant featured in AI Business

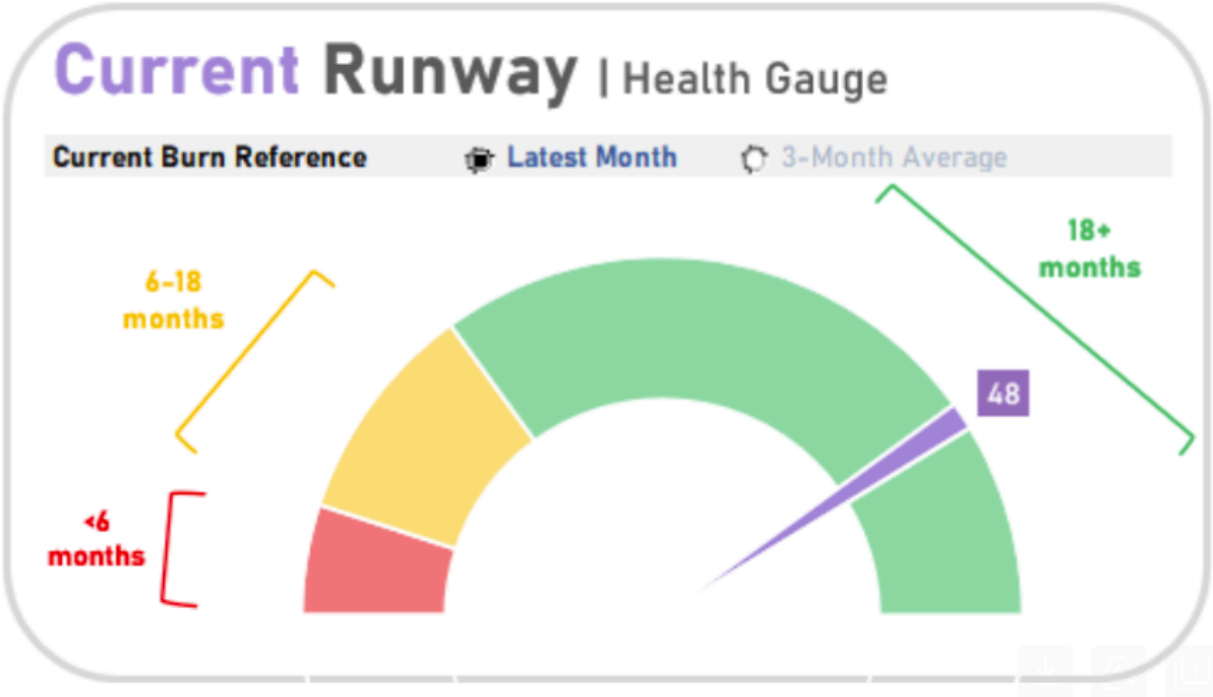

💿 Platform

- Enhanced the JustPaid Agent, a stand-alone founder/executive AI chatbot, to answer finance insights and questions within and outside the main platform.
- Added support for Xero and NetSuite, alongside our existing Quickbooks integration, offering a seamless experience for more customers.

- Introduced an automated dunning process with customizable invoice reminder templates to manage outstanding payments and improve cash flow.
- Launched a powerful, white-labeled customer portal for personalized user experiences, allowing easy management of payments, invoices, and key information.
- Now supporting credit card payments and automated charging functionality for greater flexibility and convenience.

Financials

- Cash balance = $3.4M (May)
- Burn = 4 Years of runway, considering current burn trends
- Runway = 18+ months

Current Focus / Goals

- Demoing as many account firms and startups as we can, ramping MRR revenue.
- Working on a new website with a storytelling approach to connect more effectively with our audience and pain points.
- Kicking off SOC 2 compliance.
- AI finance agent will soon work with voice assistance features.

3.

Update - April 2025

Asks:

- We are trying to get in contact with someone in Meta Reality Labs. Machine shop manager's name is Sandre Norwood. If you have connections at Meta, we would appreciate the warm intro!

Financial Metrics (All in USD):

March 2025 revenue	$52,141
April 2025 revenue	$96,282
MoM Revenue change	86.23%
COGS (Shipping, Materials, Finishing, Tooling)	$41,925
This month's Gross Margin %	56.46%

Total Spent	$147,421
Burn Rate	-$51,139
Cash On Hand	$2,431,664
Runway (months)	47

***The remaining $350K in our round is still being closed, cash on hand in table above does NOT include the $350K. We raised a total of 2.575m in this seed round.

Highlights:

- Apple started piloting the reserved machine product, so far they seem to really love the service. They've gone from $8,105 orders in March to $27,671 orders in April.
- We've developed integrations that the Apple procurement team uses to automate ordering, they have started using this in all their RFQ workflows regardless of vendor.
- We became an official Google parts supplier. They have placed $14,421 in POs so far.
  Their outsourcing lead is interested in the reserved machine product. Once the Apple pilot ends, we will try to kick off a pilot with Google.

Lowlights:

- Service was turned off for 4 days due to lack of capacity. We are still quite susceptible to bottlenecks in the process where we get bogged down as orders flood in, and need to improve our process efficiency.
- Scrap rate was high this month, it impacted our gross margin. As we try to force more orders through our pipeline, the process breaks down in certain areas (inspection, parts fail visual QC, tools breaking, etc) and we end up scrapping parts.

In May we expect to:

- Hit $120K in revenue. Current backlog up until May 12 is $53,392.
- Pursue signing a reserve machine contract with Apple. Pilot ends May 9th, meeting with VP will be after that. It will be a $120K annual contract per machine if they move forward. They are piloting 1 machine at the moment.

4.
Subject: Investor Update May 2025

We're continuing to build foundation models for radiology that can generate full-text reports directly from medical images. This is a massive market opportunity (>$40B), and we've taken some meaningful steps forward this month.

Key Highlights:

- **ARR:** $150K
- **Burn:** ~$24K/month
- **Runway:** 5+ years at current burn

Go-to-Market:

We're using a Forward Deployed Engineering model – building and fine-tuning systems directly with radiology practices and charging a monthly subscription. These models are used as investigational devices pending FDA clearance.

Revenue Goals:

We aim to reach $1–2M ARR by year-end (~7–11 high-quality customers). As our models improve (esp. in 3D imaging), we plan to raise prices accordingly.

Customer Progress:

- **Signed:** Hexarad 🎉
- **Near Close:**
  - Amerirad & Skyrad (~90%)
  - Radiology of Huntsville (~75%)
  - Radiology Associates of North Texas (~70%)
  - DocPanel (~50%)
- More are in earlier stages and progressing steadily.

Capital Use:

- No immediate hiring; only scaling headcount after hitting key milestones.
- Compute covered for 10 months via credits.
- Potential upcoming data partnership with a major PACS provider – could significantly accelerate our capabilities.

Product Milestone:

Our latest CXR model outperformed a 13-year veteran radiologist in 50% of cases and caught a missed life-threatening pneumothorax. This is the strongest signal yet that we can approach human-level performance in chest x-rays.

5.
Subject: Q1 2025 Investment Update

What we do: a place where we expert, hospital-grade healthcare is delivered directly into the homes of patients-enabled by technology, operational excellence, and your ongoing support.

A. Financial Highlights:

- Closed Q1 2025 with S$1.77 million in revenue, → a 13% year-on-year increase compared to Q1 2024.
- Achieved a 9% increase in monthly revenue from January to March 2025, indicating strong intra-quarter momentum.
- Gross margins rose to 24%, a significant improvement from 1% in Q1 last year.

This was achieved through:

- Thoughtful pricing enhancements that better reflect the value we deliver.
- Optimized payout structures and performance incentives for our healthcare professionals enabling higher productivity without compromising quality.
- We're continuing to refine this model to balance growth, sustainability, and high standards of care.

B. Scaling the H-Ward Virtual Hospital Model

Our commitment to bringing hospital care home is stronger than ever. All our hospital partners have committed to scaling their virtual inpatient programs, and we are collectively **targeting 400 virtual beds by the end of this year**, with plans to grow by **50 additional beds annually.**

C. H-BabyCare: Supporting Young Families

We've rebranded our home-based vaccination and development assessment service as H-BabyCare™, and adoption has been excellent.

We're seeing close to 200 new sign-ups each month, and
Have reached nearly 5,000 active babies under care.

This is a testament to the demand for high-quality, convenient care options for families, delivered from the comfort and safety of home.

D. Avixo EMR: Powering Distributed Healthcare

Our EMR platform, Avixo, now **supports over 600 active clinics** and has emerged as the market leader in Malaysia, with **~5% of all clinics using the platform.**

Avixo has become a critical pillar of our ecosystem-not just a record system, but an enabler of real-time care coordination and a key driver of operational scale and product integration across our services.

E. Strengthening Awareness and Brand

We are especially grateful to the Vertex Partnership Group, who generously supported us in creating a suite of high-quality product videos. Their creative efforts have played a key role in amplifying our message and showcasing the impact of our services.

The videos are now live on our website and gaining strong traction:
(H-Ward, H-BabyCare™ Protect, H-BabyCare™ Time, H-Pulse Pro)

Our refreshed website now better reflects our brand, services, and mission to bring care home.

F. Operational Discipline and Profitability Path

We've taken thoughtful steps to strengthen financial health and efficiency:

- Moved to a more cost-effective office
- Reduced personnel and moved support roles into Southeast Asia out of Singapore, tapping regional talent at lower cost.
- Reduced non-core spend, especially professional services.
- Improved collections, accelerating cash flow across key segments.
- With continued growth and tight cost controls, we expect free cashflow positivity by early 2026.

G. A Platform Poised for Product-Led Growth
We've now established:

- Well-defined segments across inpatient care, maternal and child health, primary care, and SaaS;
- Strong, institutional healthcare partnerships, and
- A robust, tech-enabled infrastructure tying everything together.

We are at a critical inflection point, where we can leverage this foundation for product-led growth and ecosystem orchestration. We're actively exploring new business models and monetization pathways within our existing user base and segments-unlocking more value per user while expanding access.

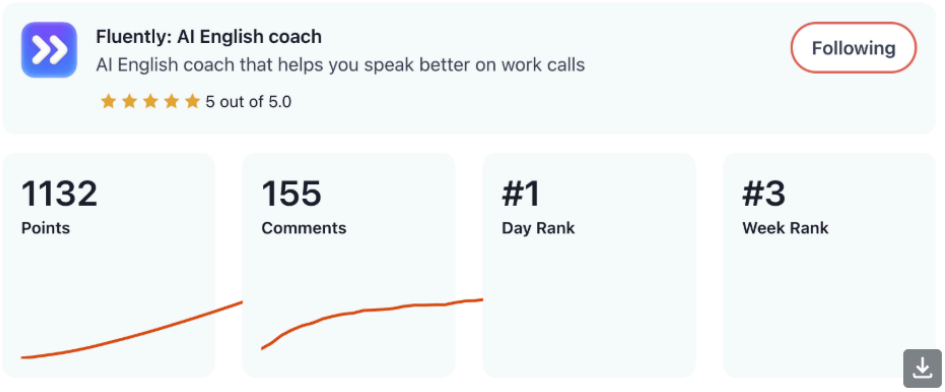

H. Fundraising and Investor Opportunity
To reach free cashflow positivity, we are **raising USD $900K via a convertible note**. These are offered with attractive liquidation preferences in the event of M&A.

We've already received soft commitments from several existing and new investors. If you are interested in participating or would like to refer someone aligned with our mission-please reach out to me directly.

I. Strategic Outlook and M&A
We are actively exploring strategic M&A opportunities, and this remains one of the most significant considerations in our ongoing journey. Several parties have already expressed interest, and we are evaluating these options to ensure alignment with our long-term vision.

If you are connected to any potential strategic partners, acquirers, or regional healthcare platforms that may be a good fit, we would be incredibly grateful for introductions or referrals. Your support in unlocking the right partnerships at this stage could be transformative.

6.
Subject: Investor Update: Mar 2025

Metrics:

- Revenue: $13,957 MRR (vs $7,059 in Feb, +198%)
- 1st week tutor usage: 15.4 mins average
- Cash: $1.83M
- Burn: $59k/month (team of 9)
- Runway: 2 years and 7 months

Highlights:

- Rolled out redesigned version of the app that focuses on speaking with AI-tutor.
- Relaunched our own TikTok content factory from scratch and it's growing fast:
- Weekly views growth: 73k → 204k → 996k → 1.8M
- Took the 1st product of the day on Product Hunt!

Priorities for this month:
Enhance AI tutor: less AI slop, more engaging conversations and interaction mechanics.
Hire a full-stack engineer.

Ask:
We are still looking for a full-stack engineer. I would really appreciate intros to strong candidates

Subject: Investor Update: Feb 2025
Hello everyone,

We are aggressively working on our onboarding and tutor experience in the app. I will share our results next month. Stay tuned!

Metrics:

- Revenue: $7,059 MRR (vs $4,338 in month, +64%)
- WAU: 733
- Cash: $1.94M
- Burn: $35k/month (team of 5)
- Runway: 4 years and 7 months

Highlights:
One TikTok video went viral, got 1.8M views and 2k installs. However, we know that the conversion rate from view to install can be x5 higher in our niche.

Ask:
We are looking for a new super strong full-stack engineer. Do you know someone you can recommend?

Priorities for this month:
mobile app: update daily practice & tutor & bug fixes.
web2web funnel and paid marketing.
relaunch our tiktok content factory.

7.
Subject: Investor Update: April 2025

In March, we rolled out a new video generation service based on WanX and started working with a few potential new customers. We also sponsored the Austin AI Film Festival which generated some good ideas and leads for us.

Metrics:

- **Revenue:** $49k (up from $43k last month, +13%)
- **Cash:** $1.8m
- **Burn:** $38k
- **Runway:** n/a

Highlights:

- We integrated Alibaba's WanX 2.1 video generation model into the service.
- We onboarded butterflies.ai as the first tester for the video generation service.
- We launched the first version of our voice cleanup/podcast AI API.
- Lots of buzz at the AI film festival. Seems like combining our video gen + video editing pipelines will be super useful for filmmakers, so we are pursuing this direction.

Lowlights:

- Website progress is still slow.

Goals/priorities for next month:

- Website, with a focus on video gen
- Marketing push around voice cleanup and video gen

8.

Subject: Jan 2024 - Investor Update

In 2024, we executed the plan precisely as laid out in our update 1 year ago. The team has grown, our first satellite is revenue generating, our next satellite is <2 months from launch, moved into a new facility, positioned for major growth with a ~$300M opportunity backlog in 2025, closed our Series A, exceeded $10M in revenue in 2024, and much more.
To accelerate our galactic destiny, plans through 2030 have grown in scale, ambition, and general epic-ness. Buckle up because 2025 is going to be wild!

Here's how we stacked up against our goals from last year's update:

2024 High-level Goals:

- >$50M in cumulative USG contract wins (fixed price only)
  - **Status: Objective complete (mostly)**
  - **Results:**
    - Definition corrected to be consistent with industry standard
    - KPI we are tracking now is *future year booked revenue*, not cumulative
    - Cumulative booked revenue is still $45.3M, not including expected and awarded STARFIRE deals or IDIQ task orders
- Sales from: DROID.001 data, STARFIRE
  - **Status: Objective complete**
  - **Result:** Several paying customers, and the number and size of each is growing
- >$12.5M in revenue (434% increase from FY23)
  - **Status: Objective nearly complete**
  - **Result:** Hit $10.6M, 276% YoY growth (and 71% of the amount raised during our Series A in the same year)
- DROID.002 launched or ready to launch
  - **Status: Objective complete**
  - **Result:** Vehicle is ready to ship to SpaceX on 1/29, launch in early March
- DROID.003 integration started and launch booked
  - **Status: Not complete**
  - **Results:**
    - DROID.003 initially planned to be replica of DROID.002
    - Found far better product market fit with a scaled-up version of DROID.002 and now going full steam in that direction

The goals we set annually are by no means a gimmie, and if we achieve 100% success - then we're soft balling it. Time to raise the bar. 2025 is about growth and positioning for infrastructure scale up in 2026 and 2027. Top 2025 goals below!

Financial KPI Definitions:

- Adding to future annual updates, as they will evolve as we scale from potential -> execution -> economic execution
- **Bookings:** Sum of total contract value for deals closed in a calendar year.
- **Revenue:** Realized calendar year revenue.
- **STARFIRE Revenue:** Sum of all revenues from our software and the data, products, and services delivered by the <our company> owned and operated DROID fleet

2025 Goals:

- **2025 Bookings:** $100,000,000
- **2025 Revenue:** $40,000,000
- **2025 STARFIRE Revenue:** $3,500,000
- Launch and commission DROID.002
- On track to launch 4x satellites in 2026, and first GEO satellite in 2027

Infrastructure Expansion:

Our infrastructure platform is a tight integration between hardware (our DROID satellites) and software (STARFIRE operating system). We've started with an initial focus on Space Domain Awareness and in-space servicing. While these *Resilience* capabilities expand across LEO and GEO, we're taking advantage of our platform's adaptability to simultaneously expand our infrastructure to address critical capability gaps and unfilled market opportunities starting with *Missile Defense*, and *Geospatial* remote sensing. To integrate these 'layers' together our *Transport* vehicles will serve as the infrastructure backbone. V1 of this infrastructure is what we now refer to as the Morningstar Fleet, and we aim to have it operational by the end of 2027. I'll elaborate on each infrastructure 'pillar' individually throughout our quarterly updates this year.

Now for the regular update.

TLDR; Exceeded $10M revenue in 2024, strategic financing contract with U.S. Space Force awarded and first milestones completed, Mothership v1 simplified, STARFIRE contract with Japanese conglomerate, and more.

Asks:

- Top hiring priority: Head of Finance
- Full time, and in-person
- Experience making budgets, projections, accounting, defense contracting
- 'Founder mode'

Q4 Highlights:

- DROID.002 ready to launch, ~March 3rd or shortly after
- IHI (Japanese) STARFIRE paid trail contract, Singapore expected by end of Q1
- Exceeded $10M revenue
- Strategic financing contract with U.S. Space Force awarded and kicked off
- First milestone (Systems Readiness Review) completed before Christmas

- 4-year space force contract
- 3 satellites, 2 in LEO, 1 in GEO
- From concept to GEO in 3yrs
- $32.6M fixed price contract
- Mothership v1 architecture simplified
- Initial version does not require deployable micro-DROIDs
- Micro-DROID will perform rendezvous and capture sequence with a DROID.alpha, the DROID.alpha will maneuver the combined system to desired dropoff location
- DROID.alpha needs 0 hardware changes to operate as a Mothership
- Eliminates an entire vehicle design/development cycle to expand immediately addressable market (saving us ~2 years minimum!) to debris removal/disposal, life extension, and others
- NRO contract moving towards operational tasking phase
- We are without a doubt the industry leader, shaping the requirements jointly with customer that will be followed by future players
- This opens the door to many new programs with the USG
- DROID.001 downlinked 1511 images in 2024
- First Satellogic images tasked and working on integration into STARFIRE platform. Increases imaging capacity by >10x

Lowlights:

- DROID.002 last minute problems:
- Radio issue identified after vibe testing
- Root cause isolated, fix implemented and validated, quick round re-vibe performed
- No impact to launch schedule, we are go for ~March 3rd!
- Payload door issue
- Payload door cover parts came in right before vibe testing, were not compliant (potato chipping)
- Removed payload doors completely and eliminated requirement
- Best part is no part!
- Not selected for phase 2 SBIR w/ Missile Defense Agency
- Refining approach and back channeling
- Not a critical near-term priority, but important customer in the long run

Future Customer Wins & Opportunities:

- Singapore MinDef proposal going through procurement ($687k over 1 year for STARFIRE)
- Western European proposal in negotiations right now
- High p(win) to supply major subsystem to Tranche-3 prime
- >$300M in high p(win) opportunity backlog this year
- Space Force program task orders as a subcontractor for other primes (R2C2)
- Space-based space-to-space SIGINT proposal being shaped w/ Parsons

Team:

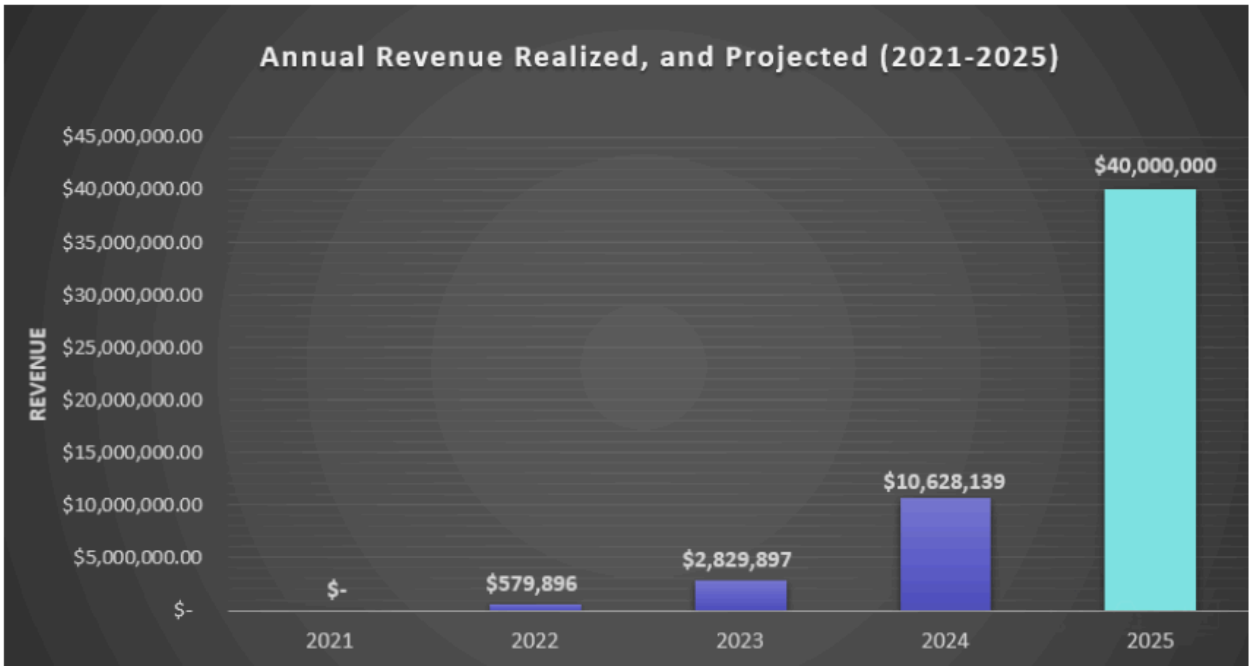

- Now ~78
- Had some good hiring wins
- Organization flattened to eliminate unnecessary middle management layers.
- **Primary Objective of the re-org: Align with our principles and unleash the potential of our company.**

Q4 Financials:

- Q4 revenue: >$5M (best quarter ever).
- Runway to March 2026 with super conservative projection.
- Increase headcount to 130 by EoY.
- Conservative STARFIRE revenue.
- No additional contract wins.
- Equipment/contract financing debt we are considering (and payment plans) included.

Q1 Goals:

- Demonstration satellite mission contract for Mid-Wave Infrared Hyperspectral geospatial remote sensing awarded.
- Singapore Ministry of Defense STARFIRE deal signed.
- Launch and commission DROID.002.
- Roll out 3rd party tasking into STARFIRE Fleet Command.
- Head of finance hired, and several TPMs (technical program/project managers).

Historical and projected revenue (2021-2025)

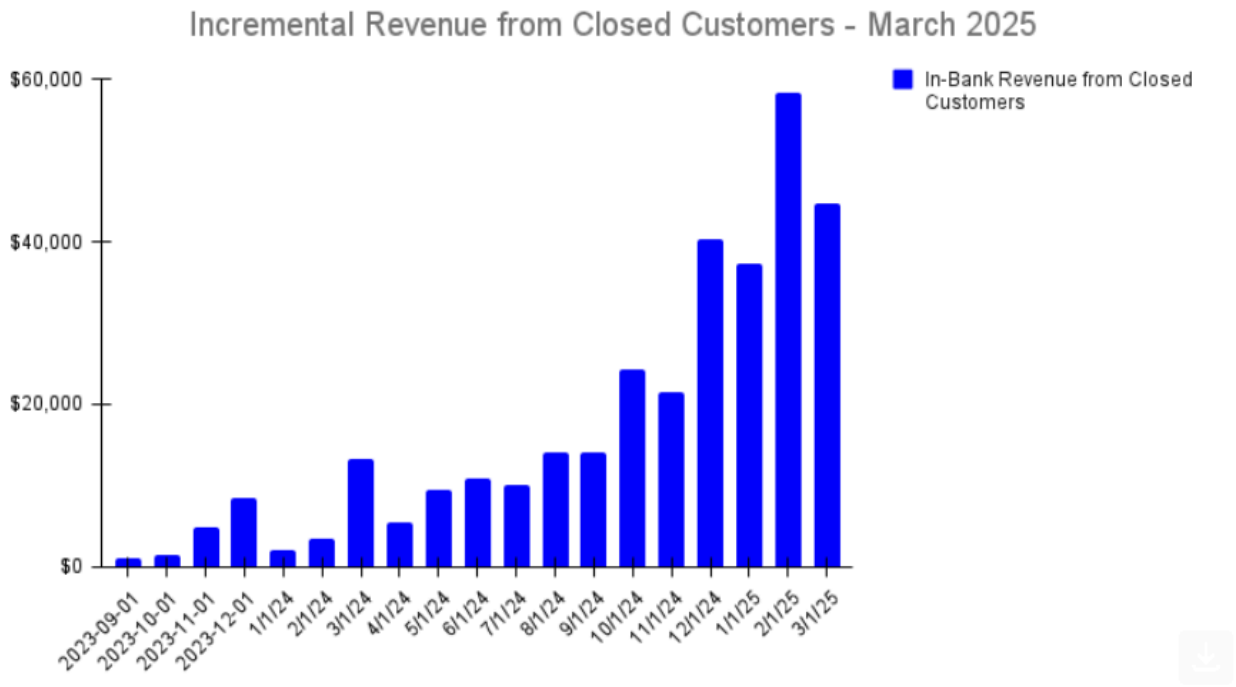

9.

Subject: Mar 2025 update

Friends & Investors,

Metrics:

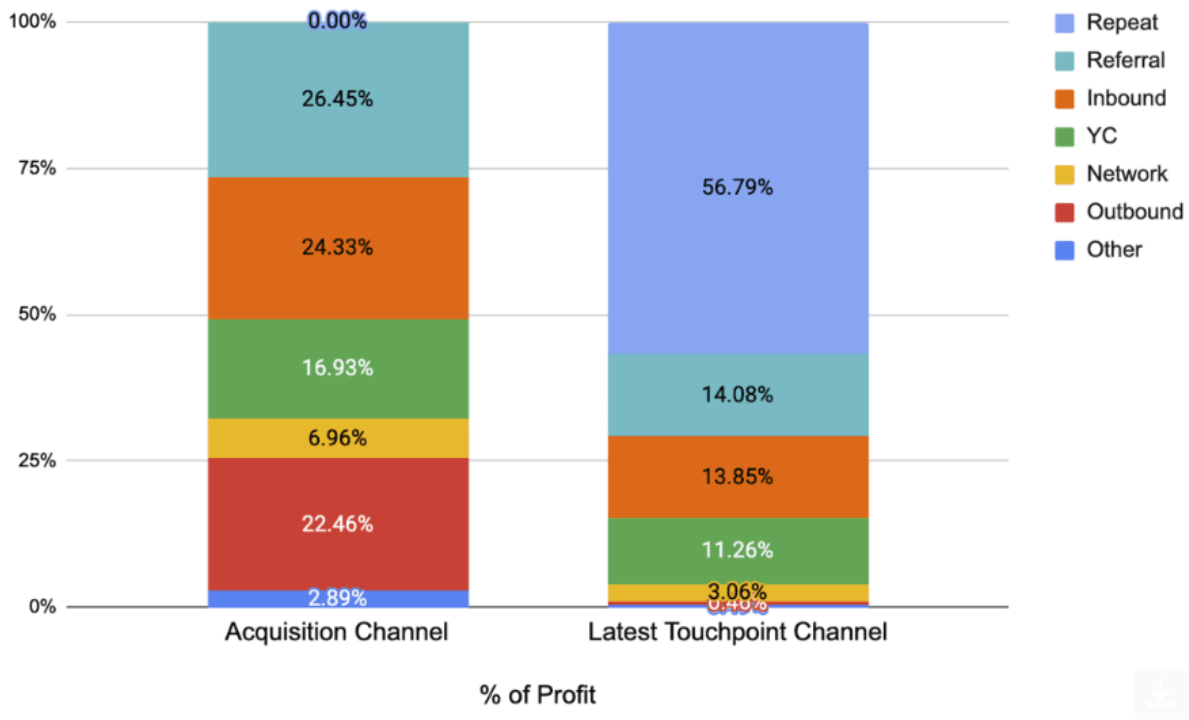

- Monthly Realized Revenue (in-bank): $44.7K (close to $50K target, have been spending lots of time on hiring recently)
- Cash: $1.96m
- Burn: -$12.9K
- Runway: ∞ (but at least 80 months)
- Incremental Revenue from Closed Customers - March 2025

Recent Analysis Updates:

We've raised the min event budget we take on to $50K to ensure our time is spent on the highest-impact events. We've also updated our pricing model to a tiered structure to better align with event size and value, and will continue iterating!
9.9% for events under $100K → up to $9,900
8.9% for events between $100K–$200K → $8,900–$17,800
7.9% for events between $200K–$500K → $15,800–$39,500
6.9% for events between $500K–$1M → $34,500–$69,000
5.9% for events over $1M → $59,000+
We did an analysis on the recent events we've been hosting, and a few interesting findings:
Inbound and Referrals are our strongest customer acquisition channels, followed by Outbound
We're scaling up outbound sales - we set up 5 new email domains, and are using lead-sourcing tools like Fiber AI and warming services like Instantly

We'll be doing these types of analysis most likely every quarter to review how we're doing and what we should be changing!

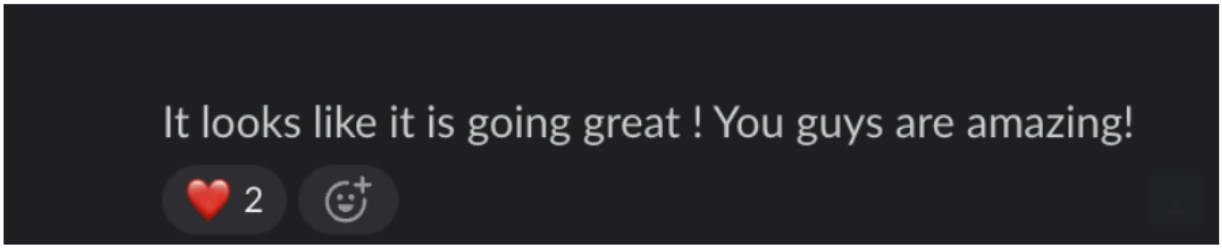

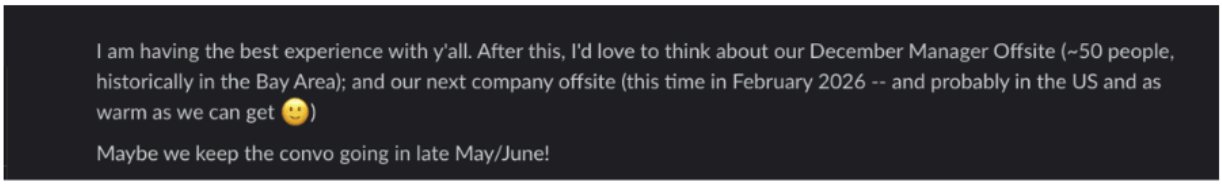

graph
Highlights:

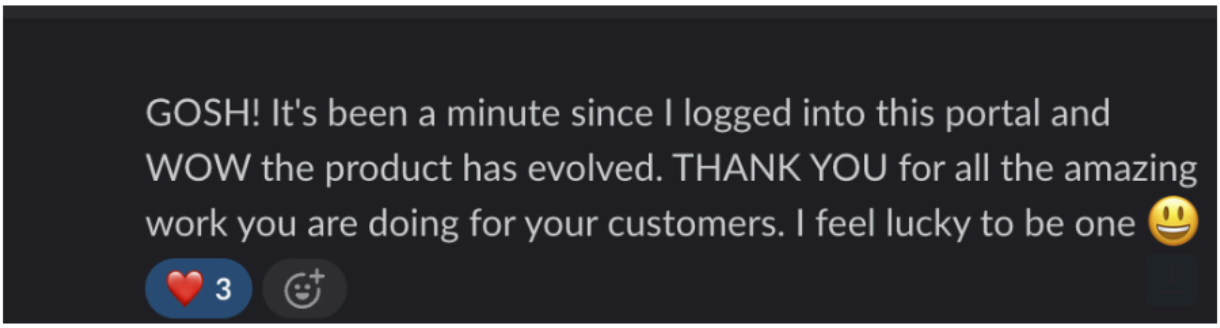

We rolled out our Northstar integration with many fixes! No leads have come through yet, but their marketing team will be promoting it more in the coming weeks. Users go through the Northstar site and would request a proposal that is then sent to us.
We drafted a $150K proposal for Northstar for an internal project to help track ROI for sponsors at their hosted events.

New PR for single event revenue! Monte Carlo's event is bringing in an estimated $70K ($28K from the customer and $42K in commission) for a 225 person company offsite to Cancun.
We're moving along on major partnerships with Northstar, AmexGBT, and Blackrock, but since these are more slow moving, hard to really nail down timelines at the moment.
We've interviewed several founding engineering candidates and have planned a recruiting trip to Boston and NYC in May. We're feeling confident that we'll make a hire who can start in May or June!

Lots of positive customer feedback:

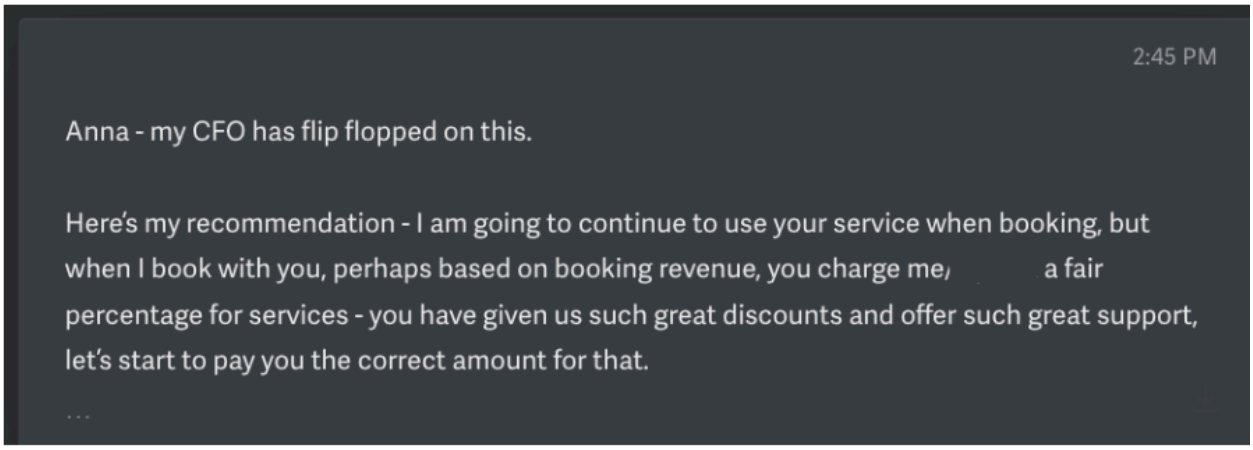

Lowlights:

Dev & Ops Bottleneck: As always, we're feeling overloaded on both Dev and Ops. Once we're finished on focusing on hiring, we'll free up more time, but we're definitely at capacity right now. We lost an annual subscription deal because the CFO backed out at the last minute, despite the customer loving our product. That said, she still plans to book with us and even mentioned that we should be charging more. This is a valuable test of pricing elasticity, and we're now experimenting with offering her a lower annual subscription fee + discounted sourcing fee per event to see if that's a more compelling structure. I know annual subscriptions are typically seen as the strongest signal for investors, so curious on any thoughts here!

Shoutouts to:

Kevin (VetRec) – Thanks for using us for your upcoming offsite and for your invaluable feedback :)
Rachel (Basis Set) – Appreciate the intro to a potential founding engineer!
Ethan (Motion) – Thanks for continuing to trust us with your offsites!
In the interest of keeping these updates brief, we've internally documented our goals – happy to share them with anybody interested. Thank you again for supporting us on our journey and please reply with any comments!

10.
Subject: Update: Q1 2025

Who we are: we provide a US-based bank account to receive, save and spend USD, as well as the ability to convert USD to local currency(naira) and transfer. We are a digital bank for African freelancers and businesses to receive USD payments, hedge against inflation, and effectively manage their finances.

Q1 was focused on moving to our new banking partner, flushing out risky customers, and tightening our transaction monitoring and compliance. This led to ~50% drop in transaction volume and revenue. However, these tough decisions set us up for a more sustainable future. As I've mentioned to our team internally, our customers did not suddenly choose to leave us. We instead chose to close high-risk accounts in order to protect us. Hence, we believe we will grow again.

In Q2, we're focused on sustainable and healthy growth, while executing on key Engineering efforts for the next phase of our growth (business accounts, new markets, and USDC/T).

Ask: Intro to Upwork Partnerships, BD, Marketing, or anyone at Upwork.

Q1 Financials (combined):

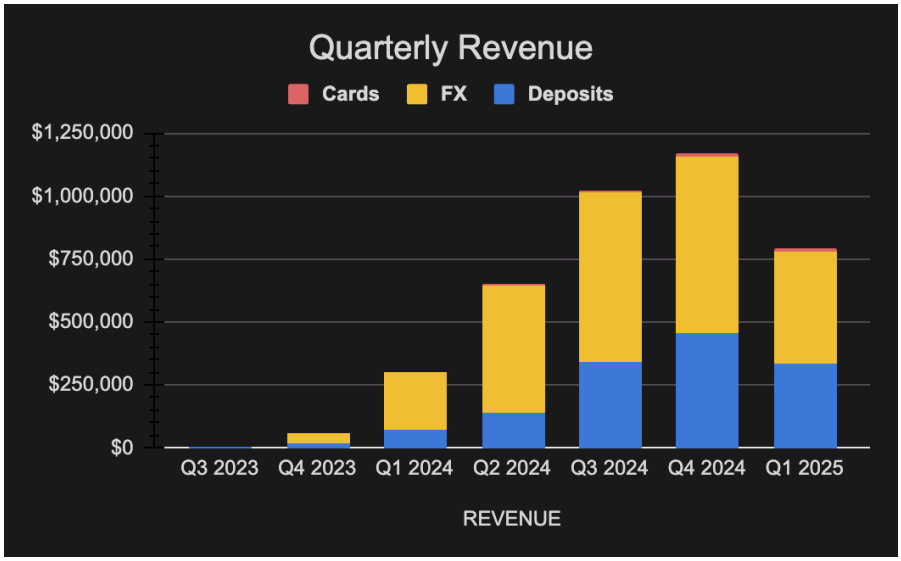

- Revenue: **$793K**
- Expenses: **$1.03M**
- Net Burn: **-$230K**
- Cash balance: **$4.8M**

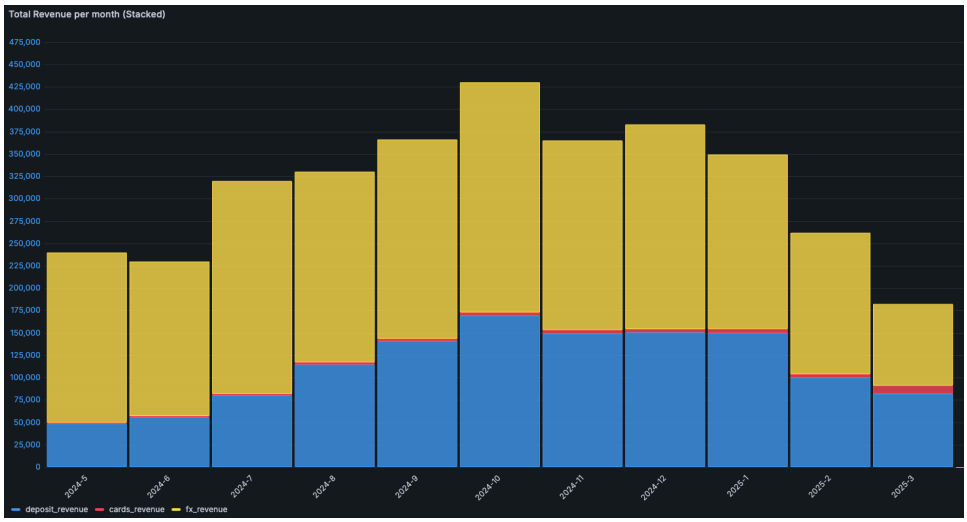

March Financials:

- Revenue**: $182K**
- Expenses**: ~$280K**
- Net Burn**: about -$100K** (approximated, as accounting is still underway)

Fundraising update

- n/a

What went well:

- **Business**
  - Improved compliance processes and removed high risk customers.
  - Launched our most requested feature - funding and converting Naira to USD.
  - Held our annual company offsite in Lagos, bringing all 30+ employees from across the world to Lagos.
  - Kicked off strategic partnerships with ALX and 3MTT, 2 organizations training the next generation of Africans in Tech.
  - Partnered with Univelcity, Telenvo, and Go My Code.
  - Conducted Upwork training sessions for 4.5K people.
  - Completed and passed the annual Data Protection Audit for our Nigerian entities - <company name> Nigeria and Afrisurge (our licensed IMTO entity).
  - Renewed our IMTO license in Nigeria.
  - Nominated for Best Fintech in Africa at the African Golden Awards 2025, alongside Moniepoint, Yoco, and others (here).
- **Hiring (now 34 people):** The following people started in Q1:
  - 1 Back-end Engineer
  - 1 Mobile Engineer
  - 1 Data Engineer
  - 1 Software Engineer in Test
  - 1 Chief of Staff
  - 1 Marketing Analyst
  - 1 Senior Fraud Analyst
  - 1 Customer Support Representative
- **Product Launches**
  - **NGN to USD conversions:** Ability for customers to transfer Naira into their account and convert to USD, either to save in USD or to fund their USD card.
  - **Revamped website:** Improved the landing page of our website.
  - **Liveness check:** Built an improved liveness flow, ensuring that all users complete liveness check regardless of the ID type used.
  - **OTA deployment for mobile fixes:** We previously required users to update their app in order to get bug fixes, causing some complaints about frequent updates. With Over-the-Air updates, we can now deploy bug fixes in the background without requiring an app update.
  - **Additional transaction monitoring logic:** We've added the ability to flag USD deposits that contain "high-risk" keywords and other high-risk patterns.
  - **Zero ETL:** Optimized our data pipeline to improve metrics update frequency and reduce costs on AWS.
  - **PostHog integration:** Integrated with PostHog to track user activity on the app.

What didn't go so well:

- **Drop in volume**: As we shared in December 2024, Q1 was going to be focused on compliance. This necessary cleanup has led to a 50% drop in volume and revenue. However, we are better off in the long-run with sustainable and healthy transactions. We now have a more stable foundation to grow for the rest of 2025 and beyond.

- **1 resignation:** A front-end Engineer recently relocated from Nigeria to Canada and decided to pursue other opportunities in Canada. We are grateful for her contributions to us and wish her well. Backfill has been hired and starts in April.

Goals for Q2 (April - June)

- **Business**
  - Increase company PTO from 12 to 15 per year.
  - Start a mid-year employee bonus program, in addition to the EOY bonus.
  - Transition support from a single shift to a double shift system (morning and evening shift) for better customer coverage.
  - Deepen partnership with ALX and 3MTT, and conduct additional sessions with their students.
  - Launch our loyalty program and business accounts.
  - Execute on growth levers such as waiving fees on specific payments, collaborating with popular influencers, and investing more in Twitter, Google, and TikTok ads (our top 3 acquisition platforms after word of mouth).
- **Team**
  - Team hangouts for team building.
- **Hiring goals**
  - 1 Engineering Lead
  - 1 DevOps Engineer
  - 1 Backend Engineer
  - 1 Front-end Engineer (backfill)
  - 1 Graphics Designer
- **Product launches**
  - Loyalty program
  - Automated balance reconciliation
  - Card withdrawals
  - 2-Factor Authentication
  - Push notifications
  - Business accounts for USD payments
  - Revamped sign up flow on the app
  - Consolidated USD wallet isolated from the USD account
  - USDC/T pay-ins
  - New markets - Ghana, South Africa, and Uganda (Kenya and Egypt in Q3)
  - Internal tooling for Treasury management in new markets
  - Metrics for new markets

11.
Subject: Investor Update: Q1 2025

Hi everyone!
This was a great quarter for us, as we closed some exciting deals. We signed a key agreement with **Bridge (Stripe)** to provide them with **On/Off Ramp solutions across all of LATAM**. This is a major milestone for our growth.

Q1 2025 Highlights
Milestones

- **Bridge (Stripe) deal**: This project is part of a broader initiative by Bridge with Stripe to facilitate money movement to and from LATAM, starting with Mexico, Brazil, and Argentina. Based on the data they shared with us, we expect to reach around **$400K in monthly revenue by December 2025**, with a TPV of approximately $100M per month.
- We also closed deals with a couple of other B2B payments companies. We expect these agreements to generate around **$50K in monthly revenue**.

Product & Feature Rollouts

- One key challenge we identified in the region is that FX trading is heavily reliant on manual and slow OTC desk operations. To solve this, we spent months finding the right FX partner in each country to fully “APIfy” and orchestrate the process, enabling instant rate locking and real-time trading. **We launched the most advanced fiat<>stablecoin B2B solution to/from LATAM!**

Q2 2025 Goals & Priorities 🎯

- **Launch Bridge (Stripe) in Mexico & Brazil**: Successfully roll out our infrastructure for Bridge (Stripe) in these key markets, enabling seamless money movement.
- **Go Live with Signed Clients**: Deploy our solution for DCO, Kraken and InfinityFX who already-signed, helping them move money efficiently through our infrastructure.
- **Market Expansion**: We’re set to expand into Colombia next quarter and are actively exploring opportunities in Central America.

Metrics 📊

- **Revenue**: $40K MR
- **Cash**: $1.6M
- **Burn**: $75K
- **Runway**: 36 months
- **New Customers (signed)**: 7

The focus now is on delivering what we've already signed, which should take us to the next level (+$4m in annual revenue). We're also evaluating a potential funding round towards the end of the year to accelerate our expansion into new regions.

12.

Subject: Investor Update, December 2023

In December, the top priority was improving the speed of image workspace and reducing 3D polygon counts. Our revenue increased slightly, 3D usage saw an increase and image workspace usage saw a decrease.

Metrics

- **Revenue**: $544 MRR, up from $466 MRR in the previous month. (+17%)
- **Cash**: $1.36M
- **Burn**: $3k last month
- **Image workspace unique users**: 39, down from 42 (-7%)
- **Voxel art generator unique users**: 14, down from 20 (-30%)
- **Generation time**: 7.5, up from 5.3 (+42%)
- **Generation time of top 10 users**: 6.5, up from 3.4 (+91%)
- **Total images generated**: 1080, down from 1652 (-35%)
- **Total voxel models generated**: 150, up from 67 (+224%)

Highlights

- Upgraded image workspace to be ~3x faster with same quality.
- Completed 3D model generator upgrade that reduced the poly count to ~20% of what they were, by far the most common complaint of 3D users.

Lowlights

- The image workspace is very confusing to new users. It is simply too hard to learn how to use the tool without an explanation. The design can be improved fundamentally to be real-time while retaining the same power since its speed is so much faster now.

Experiments

- Tried out a $12 plan for 4h of generation time. This has been popular with new users compared to the $30 plan (interestingly, almost exactly 2.5x more popular which is the ratio between 30 and 12). Will continue experimenting with plans in the middle ground.

Goals for January

- Make image workspace real-time, so you can see results as you are brushing and modifying the prompt instead of having to click "Generate" every time. This will dramatically improve discoverability of what the tool can do, which is the biggest current design barrier for new users of image workspace.
- Continue process for hiring first engineers.

13.

Subject: Investor Update January + February 2025

Metrics

- Revenue: $0 MRR (down 100%)
- Cash: $1.59M
- Burn: $18.3K/month (up 31%)
- Runway: >5 years

Did we hit our goals?

- Deliver V1 for Copperman ✅
- Deliver V2 for Mwamba ✅
- Deliver V3 for Coronado ✅
- Hire another engineer ❌
- Keep iterating for existing customers until we find something they consistently use and love ✅

Highlights

- Coronado (Coal)
  - Our final blind test delivered 75% improvement in recovery modeling
  - Coronado US Engineering Director requested (and we delivered) a formal proposal from us for the executives with annual pricing

- Copperman
  - We predicted that a deposit exists 1.5km east of their area of focus and they are planning to spend ~$500K on a hole to test the target, we are now double checking depth-wise predictions before finalizing the hole
  - They owe us $3K for the first set of predictions (payment pending)

- New Platform
  - We are launching a new iteration of the website that brings together all our existing functionality + file management for exploration companies

Lowlights

- Mwamba liked our data organization and export features but were not interested in a recurrent subscription
- Hiring is proving difficult - three paid trial periods with engineers, but no great fits
- We're still a one-person team, which forces tough prioritization decisions

Two Surprising Insights

1. Our Data Ingestion System Has Standalone Value

We've built something valuable that wasn't our original product focus: a reasoning system that can ingest mining data from hundreds of different formats (e.g. it can read drill data from excel files, csv files, pdfs and more and reconstruct it in 3D regardless of how the files are structured). This is something that no other company has been able to do (it is something that KoBold tried to do a few years ago and wrote off as too difficult). Up until this point, we have strictly used this ingestion system for processing our customers' data and publicly available data into formats suitable for model training. That said, while our company is still a "predictions" company, it seems like there is a product opportunity that revolves around this technology.

2. Mining Companies Need a Central Data Repository

Every exploration client we've worked with shares the same problem: they manage their geological data with some nightmarish combination of Google Drive, Dropbox, Mega, S3, etc. Executives lack visibility, geologists waste time reformatting old datasets (a canonical junior geologist task is to find an old dataset from an area of interest and reformat it so that it can be read by a piece of modern geological software), and valuable information gets lost when sites change hands.

The tricky thing is that the barrier to switching data storage providers is incredibly high (imagine if someone asked you to switch away from Google Drive to a different cloud storage and *asked you to pay more than you currently do*). It's nearly impossible as a standalone pitch. It's just not a big enough problem for them to justify the hassle.

Long term, we would like us to be a platform where companies store all of their mining data. The path there is paved with functionality that exploration companies *really* need and *will pay for*:

- Our AI models already provide tangible value through predictions
- Exploration research capabilities will let teams find historical data in an area (drill holes, airborne surveys, geochem, academic publications)
- File format conversions will save geologists time by supporting exports to other geological modeling software

I will spend the next few weeks onboarding our first batch of exploration customers to this platform.

Market Strategy

Right now, we're being pulled in two different directions:

- Operational mines like Coronado value our recovery and tonnage modeling. Their problems are well-defined, but they require a significant amount of custom work. That said, they have lots of cash they can allocate to solutions that improve efficiency.
- Exploration operations like Copperman value our prospectivity modeling. Their targets vary more, but work on one exploration company is usually transferable to

another. That said, they have little cash and instead often offer equity upside, which makes them a riskier customer base.

I think with a maniacal sense of urgency, we can pursue both. The alternative—picking one path prematurely—would mean abandoning either immediate validation or long-term growth. With a larger team, this would be an easier split, but for the company, this will require absolutely ruthless prioritization. We are still a one-man team, so every hour spent on one customer segment is an hour not spent on the other. I aim to deliver a blistering success on both fronts over the next two months.

Next Two Months

- Onboard first 5-10 exploration companies onto our filesystem tool
- Either
  (1) finalize the Coronado annual contract
  or
  (2) demo with a new large mining company
- Hire another engineer

Ask

- If you know any great SWEs, please reach out.

Subject: ^^same company's Investor Update November + December 2024

Metrics:

- Revenue: $10K MRR
- Cash: $1.63M
- Burn: $14K / month
- Runway: >5 years

Did we hit our goals?

1. Deliver UI to Coronado for the Buchanan mine ✅
2. Finalize an annualized contract with Coronado for the Buchanan mine ❌
3. Begin discussions to expand to other Coronado mines ✅
4. Either
   (1) Take on a new, large enterprise pilot ❌
   (2) Build model for the Tanzania customer ✅

Highlights:

- Coronado Global
  - Built V1 of the Buchanan Mine UI
    - Blind-tested our recovery (second time) and tonnage models:

        - ~91% improvement in recovery modeling
        - ~80% improvement in tonnage modeling compared to their predictive models
    - Released V2 of the Buchanan Mine UI
- Mwamba Mining
    - Trained model for gold, copper, silver, and nickel prospecting
    - Built V1 of the UI for Tanzania

Lowlights:

- Low usage on Buchanan prediction portal (V1)
    - Coronado requested predictions in a different format
    - We updated the portal (V2) and have a meeting this week to show it
- Mwamba predictions (V1) took too long to produce
    - They missed the window to purchase mining licenses, making the product useless for their immediate need
    - They are not paying for it
    - We're working on finding alternate variants that they are interested in
- We decided not to hire the engineer we mentioned in our previous update after a disappointing reference check

Takeaways:

- In two months, we trained three brand new models and shipped three different products/iterations but haven't found one that customers love quite yet
- Our modeling quality is excellent, our dataset is growing, our parsing system is improving and the time it takes to ingest a customer's dataset and to train a model is decreasing monotonically
- I'm the only employee right now, which is limiting our ability to juggle multiple enterprise contracts, engineering, operations, and hiring
- There is a lot of interest from other potential customers, but I'm not at the shipping velocity where I need to be to take on more customers right now

Goals for next 2 months:

- Deliver V1 for Copperman
- Deliver V2 for Mwamba
- Deliver V3 for Coronado (unless V2 is a hit—will confirm after Friday's ,demo)
- Hire another engineer
- Keep shipping new features for our existing three customers until we find something they consistently use and love, expand to other customers when we have bandwidth or an iteration on our product resonates

Asks:

- If you know any great software engineers or ML researchers, please reach out!

Subject: ^^ same company's Investor Update October 2024
Metrics:

- Revenue: $10K MRR (an additional $8K / month has been delayed, see below for details)
- Cash: $1.54M (still waiting on some investor's banks to approve the wire)
- Burn: $7.4K
- Runway: ~breakeven

Highlights:

- We finished producing the predictive models (recovery and tonnage) for Coronado's Buchanan Mine. In a blind test, our recovery model generated predictions with a mean absolute error of 2.6% on three months of coal mining data while Coronado's former predictive model had a MAE of 7.8% over the last year. **This means that we are decreasing their predictive error by 67%.** We are still in the process of blind testing the tonnage model and producing the UI for them.
- After interviewing ~20 highly qualified candidates to join as engineers, I am moving forward with a trial period of a week with a talented triple major (Math, Physics and CS) from MIT who dropped out of MIT's Math PhD program and has worked as CTO at two YC companies.
- We wrapped up our seed round and raised slightly more than our goal of 1.5M.

Lowlights:

- I was unable to work on models for two of our customers (the smaller private exploration companies in Tanzania and Chile) while I worked on Coronado's models. I spoke with both of them and agreed to delay their monthly payments (5K / month and 3K / month) until I have delivered a first set of predictions for them.
- The Indonesian nickel mining company (Dua Delapan Resources) re-routed us to the RFP process. Though they were verbally enthusiastic about the our pilot, they have been in talks with other geological software companies and are now requesting a formal proposal from us to clarify what features and timeline we can deliver.

Goals for next month:

- Deliver UI to Coronado for the Buchanan mine
- Finalize an annualized contract with Coronado for the Buchanan mine
- Begin discussions to expand to other Coronado mines
- Complete RFP for Dua Delapan Resources
- Either

- 1. Take on a new, large enterprise pilot and cancel our pilots with the smaller exploration companies
  or
- 2. Build models for the Tanzania and Chile customers

Asks:

- Any introductions to large mining companies would be very helpful. As we have shown with Coronado and other pilots—if we are given the opportunity to demo our software, we consistently deliver great results on tasks from early exploration, to mine planning to tonnage and recovery models.

14.

Subject: Investor Update for March 2025

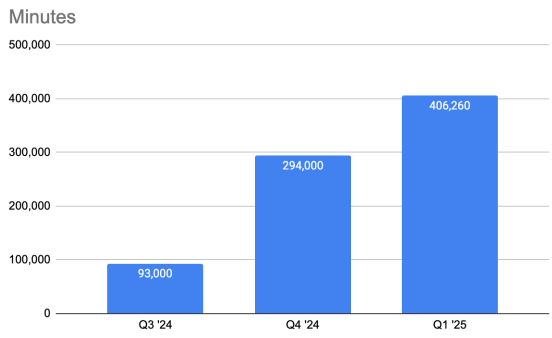

🏆 **Highlights**

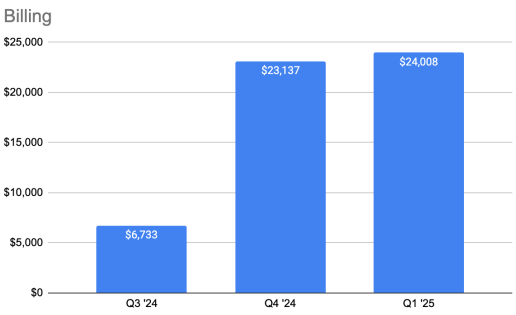

- **Rocket Mortgage**: We've kicked off planning for the POC and had a productive on-site with ~30 members of their team in Detroit. We're now officially on Rocket's Approved Vendor List (AVL)—a key milestone.
- **SMB Momentum**: Continued traction with new mortgage SMB customers coming on board.

⚠️ **Challenges**

- **Rocket Cadence**: While engagement is strong, Rocket's internal pace remains slow. We're not yet live with revenue but are pushing hard to keep momentum.
- **Enterprise Sales Cycles**: As expected, major mortgage institutions move deliberately. That said, we're building a solid pipeline and deepening relationships.

📊 **Key Metrics**

🎯 **April Priorities**

- Finalize POC scope, success criteria, and KPIs with Rocket
- Deliver first POC demo to Rocket stakeholders
- Expand SMB sales through our QuickStart offering
- Advance multiple enterprise opportunities through the funnel

We're making strategic progress and remain focused on turning early traction into scalable revenue.

Financial Health:

- Cash on hand March 31: $2.68M
- March burn: $215K
- Runway: 12.5 months

15.

Subject: Investor Updates - April

Metrics:

- **Revenue:** $25,675 (up from $23.650 last month, +8.5%)
- **Number of active customers:** 68 **(**up from 59 last month, +15%)

Asks:

- Can you connect us with an **enterprise** player that might be interested in our product? I'll follow up with forwardable intros for each.
- If you know of any mature player building their own custom support agents, please let me know. Example - Meesho (an e-commerce player) is building their own customer support voice agent.

Lowlights:

- We saw some startups churn in the last 1 week. Churn rate is currently 30%.
- A mature UAE based company copied our entire product including pricing after holding late stage discussions to buy our solution. (https://cntxt.com/)
- We had to undergo rebranding to a new name due to trademark conflicts with Stryker, a healthcare equipment giant.

Highlights:

- Most of our revenue now comes from reputable tech startups. We've been pre-qualifying clients, steering our focus away from agencies.
- We have been able to onboard good logos like **Truecaller**, **Skit** and **Cisco**.
- Enterprises are showing interest and we are doing a couple of pilots. However, things are moving slow here.

Goals/priorities for next month:

- Onboard an enterprise client: We have successfully got some enterprise pilots. Focus is now to convert these pilots into long-term contracts
- Grow to $35,000 MRR.

16.

Subject: April Investor Update (4/1/25): Slightly down on revenue, growth on applications created, and a full launch of the corporate immigration drafting suite!

TL;DR - We're slightly down on revenue this month, mostly due to one key high-paying customer's usage drop (though we are not worried about their retention) + not bringing on additional anchor customers, applications grew as Erickson began to operationalize the product more across the firm, and we launched the E-2 visa — so now we cover almost all corporate immigration drafting.

Ask:

- **Know a company who has hired a foreign national?** We'd love to talk to the immigration firm they used. There's a nice win-win here with 1) better service for your portfolio company's hiring needs in the future and 2) us winning a customer. If you have someone in mind, I'll share an easily forwarded email directly to you – let us know! **This has been a phenomenal GTM motion for us, so please ask your portfolio companies who their immigration lawyer is.**

Metrics:

Metric	4/1 Report	Commentary
Monthly Revenue	**$33,100** (-$350, -1%)	Slight drop month over month as we didn't onboard a new customer who used our product at a high rate. One customer who created $7K in applications in February only made $2K in March, more in lowlights.
Applications Created last month	**111** (+16, +17% m/m)	Increased usage from Erickson (priced at a reduced rate for pilot), signed 5 new firms who started with a sample case

Highlights:

- **Launched the E-2 Visa — which means we now cover all of the typical corporate immigration needs.** Now firms can draft the E-2 Visa (used for investors or employees of investors) on our company. We're especially excited about this visa type, as many firms outsource "business plan writing" for just a single portion of this classification, and we're aware of legacy businesses who handle this alone making $XXM per year. This is a significant milestone in our roadmap and our growth potential because our drafting breadth can support any firm, and we can now focus

on owning more of the immigration workflow. We just launched this on Linkedin — please share with your network or engage to boost!

- **Expanding to more of the workflow — customers are naturally asking for us to help beyond just drafting.** Building off of our drafting products, multiple customers are organically asking if we can help outside of the core drafting work — namely in document collection and evidence assessment, thinking of us as a "junior associate" vs. an isolated drafting product. We're excited to build here as customers spend significant time outside of drafting (>2-4w is typical calendar time in collecting documents and assessing their validity), and we're in the perfect position to build an agentic flow since customers are already uploading all their evidence into our product and we assess it before drafting. Surfacing this out to the user will save them significant time, improve the quality of our drafts, and help customers think of us as a strategic value-add to their firm vs. outsourced drafting work.

Lowlights:

- **"Failure to launch" after signing firms.** With a couple of firms, we've lost some momentum post-signing. This has happened as decision-makers who have seen results with our product sign on for the firm, and then the product makes its way to a paralegal who doesn't have sufficient context/onboarding to get good results out of our software. That paralegal then tries the product, but doesn't retain. We're planning on solving for this in a couple of ways:
  1) in-product: providing support documentation and making first-case onboarding more intuitive
  2) physically being at a firm's office — we're making our way to DC later this week in order to do this and
  3) make signed deals incentivized to getting volume discounts, forcing a firm to onboard paralegals quickly.
- **Strong dependence on a few anchor customers with hectic usage.** This month, one of our key customers used the product less ($7K in applications last month vs. $2K this month) and it showed in our top line revenue numbers. We don't have any reason to believe that this customer will churn or that they're not doing applications in our software — this one-month on, one-month off has been a recurring pattern — it did highlight that we need to either 1) help our smaller customers across more their workflow (discussed above + building an RFE product), creating more consistent usage or 2) expand to other large customers for more predictable revenue. We'll be pursuing both here, as the product trade-offs are minimal.
